

## **ALLORA USA CARE & MAINTENANCE**

– How do I clean my granite composite sink to keep it looking great?

After every use, rinse thoroughly with warm water and a mild soap, then wipe the sink dry with a clean soft cloth. Wiping is the key; this will inhibit water spotting and mineral deposits in severe hard water conditions.

– What Not to Do

Do not use any abrasive cleaners such as scrub pads or Steel Wool, as these products will dull and tarnish the finish.

Don't let household cleaning agents, such as bleach, sit in your sink for a long period of time as this may ruin the finish of your sink.

– Surface Rust & Stains

Granite composite does not rust. To remove stubborn spots, use a non-abrasive cleaner. Be sure to rinse with warm water after using any type of cleaning solution. If, overtime, your sink develops any built-up mineral deposits, clean the sink with a mixture of vinegar and water; rinse thoroughly.

– Scratches

Our granite composite sinks are made from a granite composite material that is non-porous, scratch resistant , and heat resistant up to 550 degrees.

We offer stainless steel grids to help protect the sink from scratches.

Most minor scratches can be softened with a Scotch Brite (soft scour) pad and a cleaning solution. Apply a cleansing agent, rub vigorously with the "grain" or finish of the sink (NOTE: DO NOT JUST RUB AGAINST THE GRAIN OR IN ONE AREA. YOU MUST RUB ACROSS THE ENTIRE SURFACE), then rinse thoroughly.

For severe scratches, secure a pumice rubbing compound from a hardware store, and follow the directions on the package. Note: Once the sink's finish has been restored to your satisfaction, Allora recommends the purchase of a customized sink grid to protect the bowl.
